

What Are the Issues?

- Majority of Shiloh Road is a four-lane roadway. It serves as a north-south regional arterial and experiences high traffic volumes. The four-lane roadway does not provide adequate capacity to accommodate projected traffic volumes.
- Intermittent sidewalk between West Kingsley Road and West Miller Road, limiting connectivity.
- Older Utility Lines (including Water, Sewer, Storm).

What Are We Trying to Do?

- Improve vehicle mobility and provide sufficient capacity within the project area.
- Provide pedestrian connectivity along project.
- Improve utilities to meet City and project needs.
